File Descriptions

Root Level Files

File	Description
<code>__init__.py</code>	Package root, exports all public classes
<code>__main__.py</code>	Entry point for <code>python -m mtgnp</code>
<code>main.py</code>	CLI entry point with argument parsing
<code>launcher.py</code>	Script launcher

Core Module (`core/`)

File	Description
<code>constants.py</code>	All constants (ports, timeouts, phases, error codes)
<code>game_logger.py</code>	Game logging, saving, loading, replay functionality

Start Spectator

```
python launcher.py spectator --host localhost --port 4444 --verbose
```

List Available Cards

```
python launcher.py --list-cards
```

Deck Requirements

- Minimum deck size: 1 card
- Maximum deck size: 50 cards
- Cards must be valid card IDs from the catalog
- See full card list with `--list-cards`

Client Commands

Command	Description
help	Show available commands
hand	Show your hand
state	Show full game state
pass	Pass priority
concede	Concede the game
cast <card_id> [targets...]	Cast a spell
land <card_id>	Play a land
attack <creature_id> [target]	Declare attacker
block <creature_id> <attacker_id>	Declare blocker
discard <id1> [id2...]	Discard cards (used during Cleanup step)
list	List available cards
quit/exit	Exit client

Spectator Commands

Command	Description
state	Show game state
history	Show history count
save <file>	Save history to file
load <file>	Load history from file
replay	Replay game
quit/exit	Exit spectator

Project Statistics

- Total Files: 22

- **Card Catalog:** 100+ unique cards
- **Card Effects:** 25+ implemented
- **Game Phases:** 14 phases/steps
- **Error Codes:** 11 defined
- **PDU Types:** 26 defined

Work Distribution Matrix

- Member 1: CRISOLOGO, PAUL MARTIN RYAN
- Member 2: MARQUEZ, JAMES BENEDICT
- Member 3: OCAMPO, JERICHO
- Member 4: RAYMUNDO, MARTINA GABRIELLE

Task / Feature	Member 1	Member 2	Member 3	Member 4
TCP Server: connection handling, framing, dispatch	X	X		
Game lifecycle: LOBBY, GAME_SETUP, MULLIGAN logic		X		
Turn & phase engine (all phases/steps, transitions)		X	X	
Priority & Stack logic, spell/ability resolution	X		X	
Combat system (attackers, blockers, damage)			X	
Client implementation & state rendering	X			
PDU serialisation/deserialisation (all 25 PDU types)				X
Error handling, PING/PONG heartbeat, disconnect logic				X
Verbose mode (client + server PDU logging, toggle on/off)	X			
Testing & interoperability			X	X
README / documentation / AI disclosure		X		
Bonus Features: Advanced mechanics, custom card effects, and additional combat steps				X

AI Usage

- **Gemini:** Used it for understanding the specs and rechecking if everything is implemented. Also used it to format the README.md and for debugging.
- **Codex:** Used for debugging and code creation for complex logic.
- **Claude:** Used for debugging and code creation for complex logic.

Known Limitations / Deviations from RFC

While the MTGNP 1.0 protocol is strictly compliant in its foundational engine (priority passes, network framing, sequence numbering), several **intentional deviations** were introduced to support complex bonus card effects not covered by the original specification:

- **First Strike / Assign Damage Order:** To support cards with First Strike (e.g., `White Knight`, `Black Knight`), two additional combat steps (`ASSIGN_DAMAGE_ORDER` and `FIRST_STRIKE_DAMAGE`) were added to the phase progression. The base RFC defines only 14 steps, whereas this implementation has 16 to properly resolve First Strike mechanics.
- **Colored Mana Tracking:** The RFC implies generic mana tracking, but the engine implements fully distinct colored mana pools (W, U, B, R, G) to handle specific casting costs and devotion.
- **Advanced State Mechanics:** The protocol state was augmented with `_cannot_gain_life` (for `Skullcrack`), `_prevent_next_damage` (for `Healing Salve`), and `get_devotion()` calculations (for `Gray Merchant of Asphodel`). These fields extend the state beyond the base RFC's `Permanent` definition but are required for the bonus features to function correctly.
- **Flying / Evasion:** Any creature can currently block a flyer.
- **Vigilance:** Attacking still taps the creature.
- **Hexproof / Protection:** The `_protected` flag is set by certain card effects but never verified in target validation.
- **Kicker / Madness / Suspend:** Tagged on some cards but there are no PDU fields or code paths to invoke them.
- **Trample:** Intentionally absent, as the RFC (Section 1) explicitly excludes it from MTGNP 1.0.
